Detailed Breakdown of Selected Problems and Solutions

Examining specific questions from the 2023 AMC 8 alongside their solutions enhances comprehension of mathematical concepts and problem-solving techniques. Below is an example of how select problems can be analyzed using the answer key.

Example Problem 1: Number Theory

Problem: Find the remainder when 7^2023 is divided by 10.

Solution Approach: By recognizing the pattern of the last digit of powers of 7, which cycles every 4 powers (7, 9, 3, 1), we calculate 2023 mod 4 to find the position in the cycle.

- 2023 ÷ 4 = 505 remainder 3

- Thus, the last digit corresponds to the 3rd element in the cycle, which is 3.

Answer: 3 (Choice C)

Example Problem 2: Geometry

Problem: Calculate the area of a triangle with base 8 units and height 5 units.

Solution Approach: Use the formula for the area of a triangle: (1/2) × base × height.

- Area = (1/2) × 8 × 5 = 20 square units

Answer: 20 (Choice D)
