- **Switch Mechanism:** If the fuse is fine, the issue may lie in the window switch or the motor itself.

3. Air Conditioning Not Functioning

- **Check the A/C Fuse:** If your air conditioning system isn't working, first check the fuse designated for the A/C system in the cabin fuse box.
- **Refrigerant Levels:** If the fuse is good, check the refrigerant levels and look for leaks in the system.

4. Dashboard Lights Out

- **Inspect the Instrument Panel Fuse:** If your dashboard lights are not functioning, check the specific fuse that controls the instrument panel.
- **Ground Connections:** If the fuse is intact, inspect the ground connections for any corrosion or disconnections.
