Watering Schedule Not Activating

Check the current time and date settings to confirm they are accurate. Verify that the programmed start times and watering frequencies are correctly set. Inspect valves and tubing for blockages or leaks that could affect water flow.

Leakage and Water Flow Issues

Leaks can occur if connections are loose or if thread seal tape was not applied properly. Tighten all fittings and reapply seal tape where necessary. Additionally, inspect irrigation tubing for cracks or damage.

Maintenance and Care

Routine maintenance ensures the Ace programmable 2 zone water timer continues to operate efficiently over time. The manual includes guidelines for seasonal care, cleaning, and storage to prevent damage and prolong usability.

Battery Replacement

Regularly check battery levels and replace batteries at least once a year or when the low battery indicator appears on the display. Using high-quality alkaline batteries improves reliability.

Cleaning the Timer

Clean the exterior of the timer periodically with a soft cloth to remove dirt and debris. Avoid using harsh chemicals or submerging the device in water.

Winterization and Storage

In colder climates, it is important to disconnect the timer from the water source before freezing temperatures arrive to prevent internal damage. Drain all water from the device and store it indoors during the winter months.
