Their role is crucial in managing patients in critical situations, often under pressure.

## **Key Responsibilities of an AEMT**

The responsibilities of an AEMT include, but are not limited to:

1. **Patient Assessment:** Conducting thorough assessments to determine the nature and extent of the patient's condition.
2. **Airway Management:** Utilizing advanced airway techniques and devices to secure and maintain patient airways.
3. **Medication Administration:** Administering a limited range of medications as per protocols and under the guidance of medical direction.
4. **Cardiac Monitoring:** Performing electrocardiograms (ECGs) and interpreting cardiac rhythms.
5. **Intravenous (IV) Therapy:** Initiating and managing IV lines for fluid administration and medication delivery.
6. **Trauma Management:** Providing care for trauma patients, including stabilization before transport.

## **Course Structure and Curriculum**

The AEMT training course typically encompasses both theoretical and practical components, designed to ensure that students gain comprehensive knowledge and hands-on experience.

## Course Duration

Most AEMT programs last between 6 to 12 months, depending on the institution. The training usually consists of:

- Classroom Instruction: This involves lectures, discussions, and exams that cover both foundational and advanced concepts.
