Motivation theories such as Maslow's hierarchy of needs, Herzberg's two-factor theory, and self-determination theory provide frameworks for analyzing workplace behaviors.

## Factors Influencing Motivation

Organizational psychologists examine various factors that affect motivation, including intrinsic rewards like personal growth and achievement, as well as extrinsic rewards such as salary and recognition. They also study goal setting and feedback mechanisms to determine how these elements impact employee engagement and performance.

## **Assessing Job Satisfaction**

Job satisfaction is another critical area of study, as it directly correlates with employee retention and productivity. Surveys, interviews, and observational methods are used to measure satisfaction levels, identifying areas where organizational improvements are needed.
