## Understanding Brief Solution Focused Therapy

Brief solution focused therapy is a short-term therapeutic approach centered on clients' strengths and resources rather than their deficits or issues. Developed in the 1980s by Steve de Shazer and Insoo Kim Berg at the Brief Family Therapy Center in Milwaukee, WI, BSFT is rooted in the belief that clients can identify and develop solutions to their challenges without delving deeply into the causes of their problems.

## Core Principles of BSFT

The core principles of brief solution focused therapy include:

- **Focus on the Present and Future:** BSFT encourages clients to concentrate on their current situation and future goals rather than analyzing past experiences.
- **Identifying Strengths:** Therapists work with clients to identify their strengths and resources, promoting a sense of competence and empowerment.
- **Setting Goals:** Clients are guided to articulate clear, achievable goals, which provides direction and purpose during therapy sessions.
- **Collaborative Process:** BSFT is a collaborative effort between therapist and client, emphasizing the importance of the therapeutic relationship.
- **Small Steps:** The therapy emphasizes small, manageable steps that lead to meaningful change, reinforcing clients' belief in their ability to create solutions.
