2. Behavioral Questions

Behavioral questions focus on a candidate's past experiences and how they handle various situations. These questions help interviewers gauge a candidate's problem-solving abilities, teamwork skills, and cultural fit. Examples include:

1. Describe a time when you had to analyze a large amount of data. What approach did you take?

Analytical and quantitative questions test a candidate's ability to work with data and perform financial calculations. Candidates might encounter questions

such as:

1. How do you calculate the weighted average cost of capital (WACC)?
 - WACC is calculated using the formula:
$$WACC = \left(\frac{E}{V} \times Re \right) + \left(\frac{D}{V} \times Rd \times (1 - Tc) \right)$$
where E is equity, D is debt, V is total value (E+D), Re is cost of equity, Rd is cost of debt, and Tc is corporate tax rate.
2. What is the Black-Scholes model, and how is it used?
