1. Nutrition

What we eat plays a crucial role in brain health. Dr. Amen emphasizes a diet rich in nutrients that support cognitive function. Consider the following dietary recommendations:

- **Omega-3 Fatty Acids:** Found in fish, flaxseeds, and walnuts, these are essential for brain function.
- **Antioxidants:** Fruits and vegetables high in antioxidants can protect the brain from oxidative stress.
- **Whole Grains:** Foods rich in fiber help maintain stable blood sugar levels, supporting cognitive function.

Regular physical activity is not only beneficial for physical health but also for brain function. Exercise increases blood flow to the brain, promoting the growth of new neurons. Aim for at least 150 minutes of moderate exercise each week.

3. Sleep

Quality sleep is crucial for brain health. During sleep, the brain consolidates memories and clears out toxins. Dr. Amen suggests:

- Establishing a consistent sleep schedule.
- Avoiding screens before bedtime.
- Creating a relaxing bedtime routine.

4. Mindfulness and Stress Management

Chronic stress can have detrimental effects on brain health. Incorporating mindfulness practices, such as meditation and deep-breathing exercises, can help manage stress levels and promote emotional well-being.
