- Box Scanning: Check the 3x3 boxes for missing numbers.

2. Pencil Marks

- Use a pencil to mark possible numbers for each cell. This helps keep track of potential placements without committing to a number too early.

3. The Process of Elimination

- If a number can only fit in one cell within a row, column, or box, place it there. This method is effective in narrowing down options.

4. Look for Patterns

- Certain patterns, such as naked pairs or triples, can help you identify what numbers must go where.

5. Take Breaks

- If you feel stuck, take a short break. Stepping away can provide a fresh perspective when you return to the puzzle.
